

Novelis Marks Commercial Debut Of Evercan™ Aluminum Beverage Can Sheet

Red Hare Brewing Company to package its craft beer in the world's first certified high-recycled content aluminum beverage can

ATLANTA and DENVER, April 9, 2014 /PRNewswire/ -- Novelis, the world leader in aluminum rolling and recycling, today announced at the 2014 Craft Brewers Conference in Denver that Red Hare Brewing Company will launch the world's first commercial use of *evercan*™, the company's independently certified high-recycled content aluminum sheet for beverage cans.

Red Hare craft beer packaged exclusively in cans made of Novelis' *evercan* aluminum sheet, which is made of a guaranteed minimum 90 percent recycled content, is expected to be on store shelves beginning in May 2014 in key markets throughout the southeastern U.S.

"This introduction marks the commercial availability of the world's first certified high-recycled content aluminum beverage can," said Phil Martens, President and Chief Executive Officer for Novelis. "Working with Red Hare, we have developed a proven supply chain to deliver this industry-first offering to consumers, setting an example that other beverage companies are sure to follow."

"Novelis' *evercan* is a perfect fit for Red Hare," noted Roger Davis, founder and CEO of Red Hare Brewing Company. "The independent certification of the closed-loop recycling process behind *evercan* strengthens our commitment to employing the best in sustainable business practices, making *evercan* a natural extension of the Red Hare brand."

Red Hare Brewing Company, one of the fastest-growing micro-breweries in the U.S., selected Novelis' *evercan* aluminum as part of its commitment aimed at reducing the company's environmental footprint, while preserving the freshness and enhancing the taste of its finely crafted beer. Red Hare was the first craft brewery in Georgia to package its products in aluminum cans, following a trend in the micro-brewery industry to move from bottles to cans as a way to expand distribution and appeal to on-the-go consumers. Nearly 400 craft brewers in nearly every state in the U.S. are canning more than 1,300 different beers.

"Novelis' *evercan* is an excellent model for sustainability-based innovation, which will enable beverage brands and retailers to advance their own sustainable packaging goals," said Stuart L. Hart, S. J. Johnson Professor Emeritus in Sustainable Global Enterprise, Cornell University, founder of the Enterprise for a Sustainable World and author of *Capitalism at the Crossroads*. "This introduction also serves as an important catalyst to educate other brand holders and consumers about the value of closed-loop aluminum recycling and engage them to take action themselves."

Novelis' *evercan* is now available to beverage companies globally. Company facilities in North America, Europe, South America and Asia are now certified to produce *evercan* by SCS Global Services, a recognized leader in environmental auditing.

The company's efforts to increase the recycling of beverage cans is a key component of its *strategy* to dramatically increase the recycled content of its products across its global operations to 80 percent by 2020. Already the world's largest recycler of aluminum, Novelis has announced capital investments of approximately \$500 million over the last two years that will double its global recycling capacity to 2.1 million metric tons by 2015. Recycling aluminum requires 95 percent less energy, and produces 95 percent fewer greenhouse gas emissions (GHGs), than manufacturing primary aluminum.

About Novelis

Novelis Inc. is the global leader in aluminum rolled products and the world's largest recycler of aluminum. The company operates in nine countries, has approximately 11,000 employees and reported revenue of \$9.8 billion for its 2013 fiscal year.
